

CASE STUDY

DEPARTMENT OF CONSERVATION (DOC) – MANAWATŪ WALKING TRACK UPGRADE

When remote access meets infrastructure needs, innovative delivery takes flight.

For a recent **Department of Conservation (DOC)** project on a walking track in the Manawatū, BFG Contracting needed to install culvert pipes in a location with no vehicle access. The solution? Airlift delivery.

- **Location:** Manawatū-Whanganui, New Zealand
- **Culvert pipes manufactured by INFRAPIPE and supplied through Humes Pipeline Systems**
- **Contractor:** Rangitikei Helicopters
- **Supported by:** BFG Contracting

Rangitikei Helicopters flew our pipes directly to the site – an efficient and effective solution to a challenging access issue.

This project is a great example of smart logistics, local manufacturing, and industry collaboration at its best.
