

WHAT TYPE OF PIPE DO I WANT FROM INFRAPIPE?

INFRAPIPE makes different pipes for different reasons, and in different ways. INFRAPIPE is the name of the KRAH (spiral-wound) pipe used for civil applications, made from virgin resin and in SN ratings from 2 to 40+. ECOPIPE is an SN4 version of this for non-civil applications using recycled HDPE. These KRAH pipes can be modified in any way (length, EF or RRJ, layer types and thicknesses) and come in a wider range of sizes.

EZYPIPE SN16 and EZYFLOW SN8 are made using a twinwall machine which produces a standard pipe which cannot be modified, with different materials – PE for SN8, PP - SN16. Fittings for smaller sizes are standard; for Krah sizes any custom fabrication can be made.

	EZYPIPE SN 16 Corrugated	EZYFLOW SN 8 Corrugated	FITTINGS	ECOPIPE SN 4 Krah	INFRAPIPE SN 2-40+ Krah

2500					
3200					Solid wall available to match all common sizes and PN ratings

EF jointing recommended for pressure, sewer or highly graded applications.

EF is KRAH only, EZYPIPE/EZYFLOW are rubber ring only

KRAH has no tool change so leadtime for first product is within the week.
